

Succession forestière après feu: Où la forêt en est-elle rendue 100 ans plus tard?

Ariane Roberge

2023-09-19

Study Information

1. Title

Succession forestière après feu: Où la forêt en est-elle rendue 100 ans plus tard?

2. Authorship

Ariane Roberge¹

¹ Département de Sciences Biologiques, Institut de Recherche en Biologie Végétale, Université de Montréal, 4101 Sherbrooke Est, Montréal, QC H1X 2B2, Canada.

3. Description

Enter a description of your study here.

4. Hypotheses

1. List any *a priori* hypotheses here.

Design Plan

5. Study Type

- Observational Study - Data is collected from study subjects that are not randomly assigned to a treatment. This includes surveys, natural experiments, and regression discontinuity designs.

6. Blinding

- No blinding is involved in this study.

7. Is there any additional blinding in this study?

- Not applicable.

8. Study design

Describe your study design here.

9. Randomization

- Not applicable.

Sampling Plan

10. Existing data

- Registration prior to creation of data: As of the date of submission of this research plan for preregistration, the data have not yet been collected, created, or realized.
- Registration prior to any human observation of the data: As of the date of submission, the data exist but have not yet been quantified, constructed, observed, or reported by anyone - including individuals that are not associated with the proposed study. Examples include museum specimens that have not been measured and data that have been collected by non-human collectors and are inaccessible.
- Registration prior to accessing the data: As of the date of submission, the data exist, but have not been accessed by you or your collaborators. Commonly, this includes data that has been collected by another researcher or institution.
- Registration prior to analysis of the data: As of the date of submission, the data exist and you have accessed it, though no analysis has been conducted related to the research plan (including calculation of summary statistics). A common situation for this scenario when a large dataset exists that is used for many different studies over time, or when a data set is randomly split into a sample for exploratory analyses, and the other section of data is reserved for later confirmatory data analysis.
- Registration following analysis of the data: As of the date of submission, you have accessed and analyzed some of the data relevant to the research plan. This includes preliminary analysis of variables, calculation of descriptive statistics, and observation of data distributions. Please see cos.io/prereg for more information.

11. Explanation of existing data

Describe any existing data or state not applicable.

12. Data collection procedures

Enter a description of your data collection procedures here.

13. Sample size

Enter a description of your sample size here.

14. Sample size rationale

Enter your sample size rationale here.

15. Stopping rule

Enter your stopping rule here or state not applicable.

Variables**16. Manipulated variables**

Describe manipulated variables here or state not applicable.

17. Measured variables

Describe your measured variables here.

18. Indices

- Not applicable.

Analysis Plan**19. Statistical models**

Describe your planned statistical model(s) here.

20. Transformations

Describe any transformations here or state not applicable.

21. Inference criteria

Describe your inference criteria here or state not applicable.

22. Data exclusion

Describe your data exclusion criteria here or state not applicable.

23. Missing data

State your process for dealing with missing data or state not applicable.

24. Exploratory analysis

Enter any plans for exploratory data analysis here or state not applicable.

Other

25. Other

Enter any additional information not covered by other sections, or state not applicable.
